

Ahmed Ismail Ahmed

Backend Developer

(+20) 10-6643-6323 | ahmed.ismail11199@gmail.com | linkedin.com/in/isayama3 | github.com/isayama3
Dokki, Giza, Egypt

Summary

Backend Developer with 4+ years, queue-driven distributed workflows, and high-concurrency architectures. Proven track record of building scalable APIs, real-time WebSockets integrations, and automated data pipelines for high-traffic products.

Experience

Backend Software Engineer - Hybrid

Dec 2024 – Present

Hojuzat — OTA Travel Platform | [Hojuzat.com](https://hojuzat.com)

- Built core backend services for an OTA hotel platform: search, content ingest, booking-related flows, and third-party supplier integrations.
- Designed a modular integration layer (Strategy/Factory + DI) so hotel suppliers and external APIs can be added without rewriting core search/booking logic.
- Delivered live hotel availability and pricing to clients via Laravel Reverb WebSockets, with short-polling fallback for reliable updates.
- Processed large hotel/geography datasets through CSV streaming pipelines (generators + chunking), cutting memory use vs full JSON loads.
- Orchestrated third-party content sync with Laravel Horizon queues and scheduled jobs for automated, timed fetches.
- Used Redis for caching/materialized search data and PostgreSQL GIST indexes for efficient geo queries (hotels/regions).
- Containerized the app with Docker and CI/CD for consistent deployments; integrated Zoho for CRM/data sync automation.

Backend Software Engineer — Freelance / Contract

Jun 2023 – Dec 2024

Delivered backend features for multiple clients across travel-adjacent, marketplace, SaaS, and mobile products:

- Ride-sharing APIs (booking, host approval, live location, push notifications) — Taj
- Multi-tenant fixes + GIS land-analytics integration — [Zr3i.com](https://zr3i.com)
- real-estate platform, LMS chunked video upload — Creative Minds | [goldenhost](https://goldenhost.com) · [ipluto](https://ipluto.com)
- Multi-tenant e-commerce refactor + e-invoicing — 7lsoft | [e-fatorah](https://e-fatorah.com) · [cardnet](https://cardnet.com)

Backend Software Engineer - Hybrid

Oct. 2021 - Jun. 2023

Nullisues International - Software House

- Led backend for Jiovaniaff SaaS v2 (affiliate) and e-commerce apps (Kayan, Jiovaniaff v1, Egygomla).
- Built multi-tenant Laravel apps (custom HMVC) with Redis caching/queues, Docker, and Laravel Octane.
- Optimized APIs for React/Flutter with raw SQL over Eloquent; used State pattern for order workflows.
- Added real-time features with Ratchet WebSockets on PostgreSQL.

Technical Skills

- Languages:** PHP, JavaScript, SQL, TypeScript, Bash, Python
- Frameworks & Technologies:** Laravel, Node.js, Express.js, REST APIs, Laravel Horizon, Laravel Reverb, Laravel Octane
- Data & Cache:** PostgreSQL, MySQL, Redis, MongoDB, Meilisearch (Laravel Scout)
- Architecture:** Event-driven design, queues/jobs, multi-tenancy, Docker, CI/CD
- Testing:** Pest / PHPUnit (unit testing)
- Admin / Tools:** Filament, Git
- Delivery:** Technical documentation, API docs (OpenAPI/Swagger), PoC / spike development, R&D for vendor APIs, architecture notes, runbooks

Education & Languages

B.S. in CS & IT - Mansoura University | Aug. 17 - Jul. 21

Backend Internship | ibda3.tech

Fullstack development course

ITI Back-End Course

- Arabic
- English - B2
