

Ahmed Ismail Ahmed

Senior Backend Engineer

(+20) 10-6643-6323 | ahmed.ismail11199@gmail.com | linkedin.com/in/isayama3 | github.com/isayama3
Giza, Egypt (Open to Remote / Hybrid)

Summary

Senior Backend Engineer with +5 years of experience architecting distributed, high-concurrency systems using Laravel, Node.js, and PostgreSQL. Practitioner of AI-assisted engineering workflows—utilizing Model Context Protocol (MCP) and modern AI tools to accelerate prototyping, streamline API R&D, and automate repetitive tasks, while upholding strict code quality, SOLID design principles, and comprehensive testing.

Technical Skills

- **Languages:** PHP, SQL, TypeScript, JavaScript, Bash, Python
- **Frameworks & Technologies:** Laravel, RESTful APIs, Laravel Horizon, Laravel Reverb, Laravel Octane, Laravel Scout, Node.js, Express.js
- **Data, Cache & Search:** PostgreSQL (incl. GiST geo indexes), Redis, MySQL, MongoDB, Meilisearch, Elasticsearch
- **Architecture & Design:** Event-Driven Design, SOLID Principles, Clean Architecture, Design Patterns (Strategy/Factory/State), Queues/Jobs (Horizon Worker Pools), Multi-Tenancy (HMVC), Docker, Kubernetes, CI/CD
- **Testing & Quality:** Pest & PHPUnit (Unit & Feature Testing), Code Reviews & Enforcing Coding Standards
- **Admin & Observability:** Filament, Laravel Telescope, Git (GitHub/Bitbucket workflows)
- **Delivery & Leadership:** System Architecture Notes, OpenAPI/Swagger Docs, PoC / Spike R&D, Technical Runbooks, Feature & Ticket Design, Cross-Squad Alignment (DevOps/Frontend/Product)
- **AI Tooling & Workflow Optimization:** AI-Assisted Engineering (Cursor, Copilot), Model Context Protocol (MCP) integrations, Context Management, Rigorous Code Review & QA, Automated Test Synthesis (Pest/PHPUnit)

Experience

Senior Backend Engineer | [Hojuzat.com](https://hojuzat.com)

Dec 2024 – Present

Hojuzat - OTA Travel Platform • Full-time / Hybrid, Dokki, Egypt

- **System Ownership & Leadership:** Led system design, ticket breakdown, and architectural decisions across backend, DevOps, and frontend squads to streamline sprint delivery while conducting rigorous code reviews to enforce SOLID principles and clean architecture standards.
- **Search Latency Optimization (91% Reduction):** Reduced hotel list and rate fetch loading times on the client side from 2 minutes down to 10 seconds by refactoring caching layers, optimizing database queries, and streamlining API payloads.
- **High-Throughput Data Sync & Search Indexing:** Transformed multi-supplier hotel data ingestion, room mapping, and Meilisearch indexing pipelines from hours to mere seconds by leveraging asynchronous worker pools and chunked streaming generators.
- **Complex Domain & Room Mapping:** Engineered custom data transformation algorithms to map complex third-party room rates, occupancy rules, and real-time hotel availability into unified internal domain models.
- **Search Quality & Typo Tolerance:** Fine-tuned Meilisearch typo-tolerance settings and custom ranking rules to deliver instant, highly relevant geo-search results for hotel names and destinations with minimal query overhead.
- **Queue & Infrastructure Efficiency:** Re-architected Laravel Horizon worker pools and resource limits, drastically lowering CPU/memory consumption during peak sync workloads, while optimizing Docker multi-stage builds to significantly decrease container build and deployment times.
- **Modular Supplier Architecture:** Designed and built a flexible integration layer using Strategy and Factory design patterns with Dependency Injection (DI), allowing rapid onboarding of third-party supplier rates and hotel content APIs without rewriting core search or booking logic.
- **API Versioning & Contracts:** Designed and rolled out a versioned RESTful HTTP API (\$V1\$ → \$V2\$) with parallel controllers/services and OpenAPI/Swagger specs, ensuring new feature releases ship on \$V2\$ without regressing existing \$V1\$ clients.

Backend Software Engineer

Apr 2024 – Dec 2024

Taj • Full-time / On-site, Dokki, Egypt

- Biz Buradayız ([Google Play](#)) & Taj Ride-Sharing: Developed ride-sharing backend workflows, enabling dynamic user ride matching and real-time location communication.
- Core Ride-Sharing Engine: Engineered core RESTful APIs for real-time driver tracking, ride creation, booking workflows, and user approval mechanisms for shared rides.
- Real-Time Communications: Integrated real-time location streaming and push notification pipelines to provide instant updates on booking statuses and ride approvals.

Backend Software Engineer

Mar 2024 – Jun 2024

ZR3i.COM • Part-time / Remote, Egypt

- AgTech and precision agriculture SaaS platform delivering land analytics via satellite and GIS integrations.
- Multi-Tenant Architecture: Resolved critical architectural and database issues within the multi-tenant core supporting both web and mobile client applications.
- GIS Integration: Integrated third-party Geographic Information System (GIS) APIs to render automated land analysis and precision agricultural data.

Backend Software Engineer

Oct 2023 – Apr 2024

MMB Technology • Full-time / On-site, maadi, Egypt

- Automotive marketplace platform specializing in digital car sales and auto-market applications.
- CarSpot Automotive App ([Google Play](#)): Built and optimized the backend RESTful services, database schemas, car search filters, and vehicle listing modules powering the mobile application.

Backend Software Engineer

Jun 2023 - Oct 2023

Contract projects

- Cardnet ([Google Play](#), via 7lsoft company): Executed multi-tenant backend refactoring and integrated compliant e-invoicing/payment processing services.
- Golden Host ([Google Play](#) via Creative Minds company): Architected backend booking features for real-estate hosting and developed chunked video upload pipelines for low-bandwidth environments.
- e-Fatorah & iPluto: Built custom API modules, SaaS subscription integrations, and multi-tenant fixes across travel and LMS platforms.

Backend Software Engineer - Hybrid

Oct 2021 – Jun 2023

Nullisues International - Software House

- Led backend for Jiovaniaff SaaS v2 (affiliate) and e-commerce apps (Kayan, Jiovaniaff v1, Egygomla).
- Built multi-tenant Laravel apps (custom HMVC) with Redis caching/queues, Docker, and Laravel Octane.
- Optimized APIs for React/Flutter with raw SQL over Eloquent; used State pattern for order workflows.
- Added real-time features with Ratchet WebSockets on PostgreSQL.

Education

B.S. in CS & IT - Mansoura University | Aug. 17 - Jul. 21

Backend Internship | Ibda3.tech

Fullstack development course

ITI Back-End Course

Languages

- Arabic
- English - B2
